SUMMARY

Dedicated Backend Engineer focused on building robust server-side logic and optimizing application performance through clean system design. Proven ability to architect RESTful services and manage complex data structures throughout the full development lifecycle of various software projects.

EDUCATION

Alexandria University Alexandria, Egypt
Bachelor of Science in Computer and Communication Engineering 2022 – 2027

SKILLS

Languages: JavaScript (ES6+), TypeScript, PHP, Python, Java
Frameworks & Technologies: Laravel, React.js, Next.js, RESTful APIs
Databases: MySQL, MongoDB
Tools & Version Control: Docker, Git, GitHub, Postman

PROJECTS

- Full-Stack Order Processing & Bookstore System** | *PHP, Laravel, MySQL* Dec 2025 – Jan 2026
- Built in association with the Faculty of Engineering, Alexandria University.
 - Developed a comprehensive e-commerce engine for a bookstore, focused on building a secure, data-driven backend that maintains strict referential integrity for complex transactional workflows.
 - Database Architecture:** Designed a relational schema to manage books, users, sales, and automated replenishment orders; implemented two-user-type system (Admins & Customers) with role-based access control.
 - Automated Stock Management:** Implemented MySQL Triggers to monitor stock thresholds, preventing negative inventory and automatically triggering replenishment orders from publishers upon threshold breach.
 - Secure Transactional Logic:** Engineered a multi-step checkout process featuring credit card validation, shopping cart persistence, and atomic stock updates; built admin reporting for sales analytics and top-customer rankings.
- Connect Hub — Social Networking Platform** | *Java, Swing, JSON* Fall 2024 / 2025
- Built in association with the Faculty of Engineering, Alexandria University, in a team of four.
 - Developed a Java desktop social networking platform using Swing for the UI and a file-based JSON database, applying SOLID principles and both creational and structural design patterns throughout.
 - Core Features:** Implemented user authentication with SHA-256 hashed passwords, profile management (bio, photos, password updates), a newsfeed with posts and 24-hour ephemeral stories, and a full friend-management system with requests, blocking, and suggestions.
 - Advanced Features:** Engineered a user/group search system, tiered group management with role-based permissions (Primary Admin, Admin, Member), and an interactive notification system for friend requests and group activities.
 - Design & Architecture:** Produced Use Case, State, Sequence, and Class diagrams; structured JSON data models to minimize redundancy and efficiently support story expiration, friend-request tracking, and status lookups.

COMPETITIVE PROGRAMMING

- Egyptian Collegiate Programming Contest (ECPC)**
- Ranked **67th place** (out of 200+ teams), demonstrating advanced algorithmic thinking and the ability to perform under high-pressure, time-constrained environments.
- Algorithmic Problem Solving — LeetCode — CodeForces**
- Solved **200+ problems** across various categories including Dynamic Programming, Graph Theory, and Data Structures.

CERTIFICATIONS & COURSES

MySQL Database Fundamentals | *New Horizons* July 2024
PHP & Laravel Web Development | *New Horizons* October 2024
Full Web Development Fundamentals | *Udacity* September 2022
